

RULE 4306

Local Compliance Information San Joaquin Valley, CA - Rule 4306

The San Joaquin Valley has quickly become one of the three most polluted air basins in the United States. This area has been a thriving agricultural region, but is threatened as NO_x emissions lead to ozone air pollution.

Rule 4306 aims to limit polluting emissions from boilers, steam generators and process heaters.

COEN, built around innovative solutions and exceptional customer service, is equipped and ready to help the San Joaquin Valley demonstrate full compliance with Rule 4306. Our **9 PPM Ultra Low NO_x** solutions provide *reliability, efficiency* and *confidence* so your needs are met today ... and in years to come.

COEN's local, expert engineering team is knowledgeable of the issues surrounding Rule 4306 and they are dedicated to improving the air quality in the San Joaquin

Valley. You can be assured that COEN will provide you with the latest in combustion technology like no other in the industry.
